

CMPT 371 Material Inspection

Date: 2017-01-31

Location: S342

Material under Inspection: Risk Document

Creators: Jack

Inspection Facilitator: Heramb

Notetaker: Nhi

Comments

Virtual Reality Risks

- Vestibular is the balance system in your ear, do we need to be more clear about this?

Eye strain

- Adjusting the view reason: can change the degrees, on the hardware maybe the software?
- VR vs Screen: With a screen you are only looking at one thing and not using the muscles in your eyes to focus and look around as you would with VR

Unity license

- Backups after each incremental deliverable or the beginning of each week
 - Automation? Ix will look into that

Sick

- Add pair programming session request to wiki page
- Wipes for hardware/ sanitizer, talk to Merlin about it

Communication

- Discount for backup
- We can back up all information on Slack

Changes to Implement

- Grammar needs to be fixed
- Color rating needs to be changed to accommodate a color blind team member
- Change heading "Breaking" to something more clear (Headset Damage)
- Unity license: Lists that there are three but there are actually four, correct this
- Correct "Peer" programming to "Pair" programming
