

# Acceptance Test Records

This table stores accounts of the manual Acceptance Tests performed to date on the software, confirming whether the software performs desired functions from a user's perspective.

Possible reasons for performing acceptance tests:

- **Feature** - A developer has worked on a new feature that affects some or all of the functionality being tested
- **Merge** - A feature branch has been merged into the "development" branch
- **Freeze** - Testers will perform acceptance tests after a development freeze to determine if any issues remain to be fixed for a deliverable.
- **Fix** - A developer or tester will perform after changes were made to fix one or more failing tests
- **Deliverable** - The project manager will test whether the software is conforming to requirements prior to a deliverable.
